

Cue[®]

Soybean

Novozymes Cue[®] is a plant signaling compound that aids in initiating the nitrogen fixing nodulation cycle.

FEATURES

0.133% (w/v) Isoflavonoid compounds

Compatible with most other chemical and biological seed treatments

Key signaling component connecting plants to organisms in the rhizosphere

Convenient low use rate for on-seed application

BENEFITS

- Increases root surface area
- Improves nutrient and water uptake
- Leads to stronger and earlier nodulation
- Increases stress tolerance

APPLICATION RATE

0.184 fl oz/unit (140k seeds)
0.368 fl oz/cwt of seed

PACKAGING

2 x 1.29 gallon jug;
15 gallon shuttle
