

# Ratchet®

Soybean

**Novozymes Ratchet® is a foliar applied signaling molecule that enhances photosynthesis and increases sugar production for healthier plants and higher yields.**

## FEATURES

2.5 x 10<sup>-5%</sup> lipo-chitooligosaccharides

 **Powerful signal molecule that activates processes that increase photosynthesis and sugar production**

 **Wide application window and tank mix options**

 **Compatible with wide variety of foliar herbicide, fungicides, insecticides, and nutritional products**

 **Labeled on a wide variety of row crops and specialty crops**

## BENEFITS

- Improves photosynthetic capacity which enhances plant growth
- Earlier canopy closure to conserve soil moisture and reduce weed pressure
- Increases stress tolerance leading to healthier plants
- Increases yield potential

### APPLICATION RATE

2-4 fl oz per acre

### PACKAGING

2 x 2.5 gallon jug
