

Revv[®]

Cotton

Novozymes Revv[®] is a plant signaling compound that aids in initiating the nitrogen-fixing nodulation cycle.

FEATURES

0.133% (w/v) Isoflavonoid compounds

 **Key signaling component connecting plants to organisms in the rhizosphere**

 **Compatible with most other chemical and biological seed treatments**

 **Convenient low use rate for on-seed application**

BENEFITS

- Increases root surface area
- Improves nutrient and water uptake
- Leads to stronger and earlier nodulation
- Increases stress tolerance

APPLICATION RATE

Apply 0.4 fl oz per 100 lb of cotton seed

PACKAGING

16 fl oz (473 ml)
